

NITHIWUT WILAINUCH

Senior Software Engineer

Bangkok, Thailand

nithiwut.w@gmail.com — 088-607-9220

LinkedIn: [linkedin.com/in/nithiwut-wilainuch-a90152179](https://www.linkedin.com/in/nithiwut-wilainuch-a90152179) — Portfolio: nithiwut.com

Professional Summary

Senior Software Engineer with 6 years of experience designing and developing backend and web applications across banking and startup environments. Strong hands-on experience with Java, Spring Boot, RESTful APIs, relational databases, asynchronous processing, and cloud-native systems. Experienced in database and application performance optimization, production troubleshooting, CI/CD, Docker, Kubernetes, and AWS. Also experienced in full-stack development with React and Next.js, with current hands-on involvement in Angular and NestJS for a lead generation platform.

Technical Skills

Languages: Java (11–21), Python, TypeScript, JavaScript

Backend: Spring Boot, Spring Data JPA, JDBC, NestJS, Node.js, Django

Frontend: Angular, React, Next.js, HTML, CSS

Architecture: RESTful APIs, Microservices, Event-Driven Architecture, Asynchronous Processing

Databases & Search: PostgreSQL, MySQL, Redis, Elasticsearch

Cloud: AWS (S3, SQS, Lambda, API Gateway, EKS, Batch, EventBridge)

DevOps & Infrastructure: Docker, Kubernetes, Helm, GitLab CI/CD, Jenkins, Terraform

Engineering Practices: Git, Code Review, Troubleshooting, Root-Cause Analysis, Performance Optimization, AI-Assisted Development

Professional Experience

Senior Software Engineer

ttb bank — Bangkok

Apr 2023 – Present

- Design and develop backend services for Roddonjai, a customer-facing used-car marketplace platform, using Java and Spring Boot, supporting seller onboarding, vehicle inspection, listings, campaign configuration, and internal operations.
- Contribute to the co-development of a multi-channel lead generation platform with an external vendor using Angular, Node.js, and AWS Lambda, supporting lead capture and integration with internal banking systems.
- Develop proof-of-concept and core features for a new internally developed lead generation platform using Angular and NestJS, exploring capabilities required to capture, process, and route leads from multiple channels to downstream banking systems.
- Optimize database access and high-volume backend processing by refactoring iterative JPA operations to JDBC-based bulk operations, improving processing efficiency for data-intensive workloads.
- Design asynchronous workflows using AWS SQS for long-running processes, including report and data exports, decoupling background processing from synchronous API requests.

- Design an event-driven image optimization pipeline using Amazon S3 events and AWS Lambda to generate resized WebP variants, improving image delivery efficiency and reducing unnecessary delivery of original images.
- Drove the upgrade of backend services from Java 11 to Java 21, resolving compatibility issues and adopting modern Java features such as records to improve code clarity and maintainability.
- Support production workloads running on Kubernetes by troubleshooting application and deployment issues, performing root-cause analysis, and implementing reliability improvements.
- Contribute to technical design, code reviews, task breakdown, estimation, and delivery planning while coordinating with Business Analysts, System Analysts, QA, Solution Architects, vendors, operations, and engineering teams.

Software Engineer

Purple Ventures Company Limited — Bangkok

May 2021 – Mar 2023

- Developed and maintained production backend services using Java, Python, and AWS Serverless technologies in a fast-paced startup environment.
- Built serverless APIs and background processing workflows using AWS Lambda and related cloud services to support business and operational requirements.
- Migrated deployment processes from manual zip-based deployments to automated CI/CD pipelines, improving deployment consistency and reducing manual release effort.
- Containerized application services using Docker and integrated build and deployment workflows with Jenkins.
- Developed internal promotion verification and reporting services while collaborating with operations and data teams to automate operational workflows.
- Investigated, debugged, and resolved production issues in collaboration with cross-functional engineering teams to maintain application reliability.

Backend Developer

Institute of Public Policy and Development — Bangkok

Jun 2020 – Apr 2021

- Developed backend services and RESTful APIs using Django and PostgreSQL.
- Developed frontend components using React and Next.js based on UI/UX designs, gaining hands-on experience across both frontend and backend application development.
- Developed and maintained ETL processes and data pipelines while collaborating with team members to ensure data accuracy and system reliability.

Education

Bachelor of Engineering (Computer Engineering)

Chulalongkorn University — Bangkok **Senior Project: License Plate Recognition Using Deep Learning**

- Developed a license plate recognition system using YOLO transfer learning, Python, and Keras.
- Deployed the application to Google Cloud Run using containerized deployment.
